EXAMINER	
POLANSKY, GREGG	

ART UNIT	PAPER NUMBER
1611	

MAIL DATE	DELIVERY MODE
09/04/2008	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/626,943	RUBINO ET AL.	
	Examiner	Art Unit	
	GREGG POLANSKY	1611	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *11 June 2008*.

2a)☐ This action is **FINAL**. 2b)☒ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) *12-21 and 31-37* is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) *12-21 and 31-37* is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)☐ All b)☐ Some * c)☐ None of:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☒ Information Disclosure Statement(s) (PTO/SB/08) Paper No(s)/Mail Date *6/11/2008*.
4) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____.
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____.

DETAILED ACTION

Status of Claims

1. Applicants' response, filed 6/11/2008, to the Office Action mailed 3/17/2008 is acknowledged. Applicants amended Claims 12 and 31, and presented arguments in response to the Office Action. Further, Applicants presented a 37 CFR 1.131 Declaration, declaring that the present invention was conceived prior to December 27, 2001 in the United States, and work continued in the United States, with diligence, from the date of conception to the reduction to practice of the invention.

2. Applicants' Information Disclosure Statement, filed 6/11/2008, is acknowledged and has been reviewed to the extent each is a valid reference on a U.S. Patent. References provided without translation were not reviewed.

3. Claims 12-21 and 31-37 are pending and presently under consideration.

4. Applicants' arguments have been fully considered and are persuasive in part. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

5. The 37 CFR 1.131 Declaration filed on 6/11/2008 under 37 CFR 1.131 is sufficient to overcome the Azrolan et al. reference. Further, Applicants have provided evidence in this file showing that the invention was owned by, or subject to an obligation of assignment to, the same entity as the Azrolan et al. invention at the time this invention was made.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 12-21 and 31-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Skotnicki et al. (U.S. Patent No. 5,362,718), in view of Waranis et al. (U.S. Patent No. 5516770) and Haeberlin et al. (UK Patent Application Publication GB 2327611).

Skotnicki et al. teach hydroxyester derivatives of rapamycin, including the instantly claimed CCI-779 (rapamycin 42-ester with 3-hydroxy-2-(hydroxymethyl)-2-methylpropionic acid), and that these derivatives are useful as immunosuppressive, anti-inflammatory, antifungal, antiproliferative, and antitumor agents. See column 1, 1st paragraph and last paragraph, and column 12, "EXAMPLE 9". The reference suggest

the rapamycin derivatives can be formulated with suitable carriers, including alcoholic solvents, and excipients for *inter alia* oral or parenteral administration. See columns 7 and 8.

Skotnicki et al. do not teach the formulations of CCI-779 recited by the instant claims.

Waranis et al. teach an injectable rapamycin solution comprised of a mixture of a concentrate of rapamycin in propylene glycol with a diluent of polyethylene glycol 400 and a polyoxyethylene sorbitan ester (e.g., polysorbate 80) and water (*see* Examples 1-3), yielding an injectable formulation concentration of rapamycin of 0.2 mg/ml to 4 mg/ml (*see* column 2, lines 44-47), with 0.07-9.5% polysorbate 80 and 12-87% glycols (*see* column 3, lines 29-54). These concentrations are within the concentration ranges specified in the claims of the instant application.

Waranis et al. do not teach use of an antioxidant. Waranis et al. teach formulations of rapamycins, but not CCI-779 specifically. Waranis et al do not teach a formulation comprising ethanol (recited by instant Claim 32) or vitamin E (d,l-α-tocopherol) (recited by instant Claims 33, 34, and 36).

Haeberlin et al. teach the use of various carboxylic acids to stabilize (i.e., preserve) oral and parenteral formulations of macrolides, preferably a rapamycin. The reference teaches that macrolides [note: this would include CCI-779] are unstable upon storage, undergoing a variety of different degradation reactions and an acidic environment inhibits the degradation. See page 3. The preferred acids include malonic acid, oxalic acid, citric acid, and lactic acid (*see* page 4, lines 15-22). Haeberlin et al.

teach a 0.05% to 5% acid concentration range and further disclose that the preferred amount of acid may be determined by routine experimentation. Haeberlin et al. give as an example, a formulation of a rapamycin with ethanol, Cremophor® EL (a surfactant), and citric acid. They present other examples of rapamycin formulations which include the use of 1,2 propylene glycol as a solvent and d,l-α-tocopherol (vitamin E) as an antioxidant. See pages 5-7.

With respect to claimed concentration ranges in the instant compositions, it is not inventive to discover the optimum or workable ranges by routine experimentation when general conditions of a claim are disclosed in the prior art. See *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233,235 (CCPA 1955) and MPEP 2144.05(11).

It would have been obvious to one of ordinary skill in the art at the time of the invention, who was motivated to produce parenteral formulations of rapamycins, including CCI-779, to combine the teachings of Skotnicki et al., which discloses hydroxyester rapamycin derivatives and formulations thereof, with those of Waranis et al. and Haeberlin et al., which teach rapamycin formulations. Waranis et al. teach the concentrations of the solvents (e.g., propylene glycol and polyethylene glycol 400), rapamycin, and a specific surfactant (polysorbate 80) for a parenteral rapamycin formulation. Haeberlin et al. teach the instability of rapamycins and the need to use citric acid and d,l-α-tocopherol as a stabilizer in a rapamycin parenteral formulation. This would have motivated one to include citric acid/d,l-α-tocopherol in the formulations taught by the other two references. Since Skotnicki et al. do not teach specific formulations, one would have been motivated to find art teaching specific formulations

of rapamycins, including CCI-779, such as is taught by Waranis et al. and Haeberlin et al. One would have been motivated to perfect a parental formulation of CCI-779 to reduce the bioavailability uncertainties of other forms of administration (e.g., oral), leading to more accurate and reproducible doses of the agent.

Applicants argue "[t]here is no teaching in the art of any problems associated with CCI-779 parenteral formulations much less the specific problems recognized by the invention. In the absence of recognition of the problem in the art, there can be no motivation in the art to look for a solution".

This argument is not convincing. It is presumed that Applicants are referring the stability problems associated with CCI-779 that are disclosed in the Specification. Applicants' attention is directed to the Haeberlin et al. reference, which teaches that macrolides (which the reference discloses include rapamycin and rapamycin derivatives) are unstable upon storage, and disclose formulations with *inter alia* citric acid and d,l-α-tocopherol to rectify this problem (*supra*). Thus, Haeberlin et al. provides motivation to combine the prior art relied upon in the rejection.

Conclusion

9. Claims 12-21 and 31-37 are rejected.

10. No claims are allowed.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to GREGG POLANSKY whose telephone number is

(571)272-9070. The examiner can normally be reached on Mon-Thur 9:30 A.M. - 7:00 P.M. EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sharmila G. Landau can be reached on (571) 272-0614. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
